

Modeler's Forum

28 May 2026

Four in attendance (Bob Wright taking notes and photos).

Bob Willard – Showed off several “O” Scale scratch-built buildings he has been working on. They are for a retail coal/oil dealer for his 24” x 24” module. He used pan pastels for the colors on the buildings.

John McMullen – Purchased an end of train device (Bachmann HO) and brought it in to ask questions about installing it. He has been running wire(s) on his home layout and was assuming he was going to have to practice soldering, but an acquaintance suggested using plugs instead. While cleaning up his basement (to make room for more train stuff) he found loads of projector overlays that he was thinking he could cut up to use as windows; he has a lot of them, so he offered those he brought in to us.

Kent Waterson – Showed off his more finished White River Junction Depot, he has been 3D printing doors with pediments.
